2.1 Functions 5

2.1.1 pyrubberband.pyrb.time_stretch 5

2.1.2 pyrubberband.pyrb.pitch_shift 6

3 Contribute **7**

Python Module Index **9**

A python wrapper for rubberband.

For now, this just provides lightweight wrappers for pitch-shifting and time-stretching.

All processing is done via the command-line through files on disk. In the future, this could be improved by directly wrapping the C library instead.

CHAPTER 1

Example usage

```
>>> import librosa
>>> import pyrubberband as pyrb
>>> y, sr = librosa.load(librosa.util.example_audio_file())
>>> # Play back at double speed
>>> y_stretch = pyrb.time_stretch(y, sr, 2.0)
>>> # Play back two semi-tones higher
>>> y_shift = pyrb.pitch_shift(y, sr, 2)
```

CHAPTER 2

API Reference

2.1 Functions

Command-line wrapper for rubberband

time_stretch(y, sr, rate[, rbargs])	Apply a time stretch of *rate* to an audio time series.
pitch_shift(y, sr, n_steps[, rbargs])	Apply a pitch shift to an audio time series.

2.1.1 pyrubberband.pyrb.time_stretch

pyrubberband.pyrb.**time_stretch**(*y*, *sr*, *rate*, *rbargs=None*)

Apply a time stretch of *rate* to an audio time series.

This uses the *tempo* form for rubberband, so the higher the rate, the faster the playback.

Parameters

y [np.ndarray [shape=(n,) or (2, n)]] Audio time series, either mono or stereo

sr [int > 0] Sampling rate of *y*

rate [float > 0] Desired playback rate.

rbargs Additional keyword parameters for rubberband

See *rubberband -h* for details.

Returns

y_stretch [np.ndarray] Time-stretched audio

Raises

ValueError if *rate <= 0*

2.1.2 pyrubberband.pyrb.pitch_shift

pyrubberband.pyrb.**pitch_shift**(*y*, *sr*, *n_steps*, *rbargs=None*)

Apply a pitch shift to an audio time series.

Parameters

y [np.ndarray [shape=(n,) or (2, n)]] Audio time series, either mono or stereo

sr [int > 0] Sampling rate of *y*

n_steps [float] Shift by *n_steps* semitones.

rbargs Additional keyword parameters for rubberband

See *rubberband -h* for details.

Returns

y_shift [np.ndarray] Pitch-shifted audio
